

- 7 A hollow cylinder of radius  $a$  is fixed with its axis horizontal. A particle  $P$ , of mass  $m$ , moves in part of a vertical circle of radius  $a$  and centre  $O$  on the smooth inner surface of the cylinder. The speed of  $P$  when it is at the lowest point  $A$  of its motion is  $\sqrt{\frac{7}{2}ga}$ .

The particle  $P$  loses contact with the surface of the cylinder when  $OP$  makes an angle  $\theta$  with the upward vertical through  $O$ .

- (a) Show that  $\theta = 60^\circ$ . [5]
