

A large number of athletes are taking part in a competition. The masses, in kg, of a random sample of 7 athletes are as follows.

98.1      105.0      92.2      89.8      99.9      95.4      101.2

Assuming that masses are normally distributed, test, at the 10% significance level, whether the mean mass of athletes in this competition is equal to 94 kg. [7]
