A particle P of mass  $m \log n$  is attached to one end of a light elastic string of natural length 2m and modulus of elasticity 2mgN. The other end of the string is attached to a fixed point O. The particle Phangs in equilibrium vertically below O. The particle P is pulled down vertically a distance d m below its equilibrium position and released from rest.

<b>(b)</b>	Hence find the speed of $P$ when it is 2 m below $O$ . [2]
