The random variable Y is the sum of two independent observations of the random variable X. The probability generating function $G_Y(t)$ of Y is given by

$$G_Y(t) = \frac{t^2}{(4 - 3t)^4}.$$

(a) Find
$$E(Y)$$
. [3]

- (b) Write down an expression for the probability generating function of X. [1]
- (c) Find P(X = 4). [3]
