

A uniform lamina is in the form of a triangle ABC in which angle B is a right angle, AB = 9a and BC = 6a. The point D is on BC such that BD = x (see diagram). The region ABD is removed from the lamina. The resulting shape ADC is placed with the edge DC on a horizontal surface and the plane ADC is vertical.

Find the set of values of x , in terms of a , for which the shape is in equilibrium.	[6]
