A basketball club has a large number of players. The heights, xm, of a random sample of 10 of these players are measured. A 90% confidence interval for the population mean height,  $\mu$ m, of players in this club is calculated. It is assumed that heights are normally distributed. The confidence interval is  $1.78 \le \mu \le 2.02$ .

Find the values of  $\sum x$  and  $\sum x^2$  for this sample.
